Applicant's election without traverse of Group II-claims 1-8 and 16-20 in Paper No. 6 is acknowledged.

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the cap mounted on the substrate as recited in claim 1, line 5, must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1, line 5, the phraseology "a threshold cap mounted on said substrate" is not readily understood by the Examiner. It appears that the cap is mounted on the sill and the sill is mounted on the substrate. Does the applicant mean that the cap is mounted on the substrate via the sill? In claim 8, line 2, the phraseology "wood flower" is not readily understood by the Examiner. There is a lack of antecedent basis for the following: In claim 2, line 3, "the end", lines 4-5, "the adjacent end", and line 5, "the other substrate section".

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3634

Claims 1, 3, 4, and 16-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Headrick et al. Headrick et al. disclose a threshold assembly comprising a substrate (26) made up of at least two sections (column 5, lines 29-32 recites a plurality of plastic blocks forming the substrate), a sill (22) having an upwardly exposed channel, an adjustable cap (13) mounted in the channel, and a side light/panel cap (14) mounted in the channel. With respect to claim 4, it's well known that when plastic is formed and shaped into a device (in this case a substrate) that air or tiny air bubbles are formed therein which is considered a "filler".

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Headrick et al. All of the elements of the instant invention are discussed in detail above except providing the plastic to be recycled plastic. It would have been obvious to one of ordinary skill in the art at the time of the invention to provide the substrate of Headrick et al. with recycled plastic instead of virgin plastic since recycled plastic is a well known replacement for virgin plastic because it's cheaper to manufacture and recycled plastics would perform equally as well as virgin plastics.

Claims 2, 7, and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 3634

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. patent to Baczuk et al. disclose a substrate (34, 36, and 38) in a plurality of sections. U.S. patent to Kepler et al. disclose a threshold assembly having a substrate formed of material similar to that of the applicant's invention. U.S. patent to Mees et al. disclose a threshold assembly formed of material similar to that of the applicant's invention.

Claims 2, 7, and 8 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
